

## CREATING A DrJava PROJECT FOLDER

1. Create a folder as **TeamMemberLastNamesAlphaOrderSecNoPANo**.
2. Create a **classes** and **src** folder insider the team's folder.
3. Open DrJava.
4. Select **Project** to create a new project.
5. Navigate to the team's folder and save the team's folder as the DrJava project folder using the same team folder name.
  - a. Insert the classes folder in the path for the **Build Directory**.
  - b. Insert the src folder in the path for the **Working Directory**.
  - c. Click Apply then Ok.
  - d. The instructions for the Main Class is below.

- e.
6. Open the project folder if it is closed.
7. Open any .java files you need to add to it; then, save the .java files into the src folder.
  - a. One of the .java files should be the application class with the main().
8. Point to highlight the project folder name, right click **Project Properties**.
9. In the **Project Properties** window, click the ellipsis button (... button) to the right of the Main Class field.
10. Go to the src folder of your PA and click on the .java file with the main(), click **Open**.
11. Now the **Main Class** field contains **src.ApplicationClassName**. Delete **src.** before the application class name.
12. Once the Main Class has been properly referenced, click **Apply**, then **Ok**.

13. The name of YOUR project folder and application class will have your last name and your team member's last name in alphabetical order. Here is the **view** of the Project folder. The **classes** folder contains all **.class** files. The **src** folder contains all **.java** and **.java~** files.
- a. Always go to Project in DrJava to open the folder. It'll be opened in the same view as it was saved.
